

Tim leads the DLA Piper technology and sourcing practice in Australia and has extensive experience in all areas of ICT, outsourcing, and complex application development and upgrade projects. He continues to advise on many large complex transformation programs for Government clients and has been recognised by Chambers Asia Pacific as one of Australia's leading lawyers in technology, media and telecoms.

Nick is a Director at Landell, and has over 20 years experience in ICT in both private and public sector capacities. Nicholas has a broad range of expertise from IT security and application development to information management, where he has been awarded the Sir Rupert Hamer award for Records Management. He specialises in large complex ICT procurements and has worked with nearly all Departments of the Victorian Government. Today he'll share his thoughts on sourcing strategy and approach when adopting Agile-like methods for delivery.

Stephen and has been working in the realm of probability and risk for over 30 years. Stephen is a specialist when it comes to modelling uncertainty in cost estimates, implementation schedules, cash flows and other quantitative measures of project outcomes. Steve is at the forefront of developing applications of complexity science to large projects and I welcome him to the stage to discuss the assessment of complexity in ICT projects.
